Show Me the Mono ™

Monospaced typefaces were once associated with mechanical typewriters; now, they are primarily tools for programmers. But there's no reason these fonts can't be used everywhere – by everyone! At the macro level, the strict grid forces the letters to be exactly the same width – which gives your typesetting a funky rhythm & surprising texture. At the micro scale, the letters' skeletons are simple & open, making the text legible & easy to read. Contrarily, the giant dots (e.g. ä,i,j,:,!,? etc…) add speckle & quirk to tickle your readers' eyeballs and to keep them engaged.

Check out these upright styles for the family. If the six weights aren't enough, there's always also a "variable" version to let you use any other weight in between. **Rad!**

How wacky are these italics?? The Extra Light is basically monolinear (like the uprights), but as the weight increases, so does the contrast. The Ex Bold tastes like a funky Didone.

A-Z + 0-9 have all been trapped inside O, ●, □, & ■ to give a new way to type what's on your mind. And since most languages have additional letters & marks beyond those in English, these others were of course not neglected. Simplified diacritics & letters (e.g. ĄĐƐŁŊßǝγ…) have been included so all supported languages worth inside these shapes as well. We hope you'll enjoy them!

Thanks to this extensive collection of "box drawing" characters (148 of them) you can toss out your fancy illustration apps and simply create all your artwork with these modular components. They also come in handy when programming the next DOS-like operating system… and while you're at it, why not use them to create spreadsheets, annual reports, and newspaper sports/stocks listings? The possibilities of what you can make with these are truly endless – the only limit is your imagination! But we both know you have an amazing imagination!!!!!!!!!!!!!!!
